notable

The furniture standards committee was comprised of 10 members including administration, contracting, facilities, nursing, patient representative, and infection control.

st. luke's episcopal health system

case study

As objective experts in the commercial furniture industry, **St. Luke's Episcopal Health System (SLEHS)** hired our firm to develop a program of furniture standards for the hospital. Pulling from decades of experience in the furniture industry, we worked closely with the Facilities and Capital Projects team at SLEHS to:

- Determine the goals and vision of the hospital
- Define "Best Value" as it pertains to SLEHS
- Determine criteria based on the needs of SLEHS to be used as guidelines for furniture selection
- Develop methods to ensure the process is maintained for the future

The development and use of such a program allowed SLEHS to reduce and avoid a buildup of obsolete product in inventory, reduce furniture expenses, effectively manage/implement projects, efficiently recycle furniture throughout the facility, and create a consistent brand cohesive with the care provided by the hospital.

*GENERAL NOTES BIFMA tested up to 300 lbs. | easy to clean without special procedures
24 hour warranty including parts and labor | options available for armless and stool with foot ring
